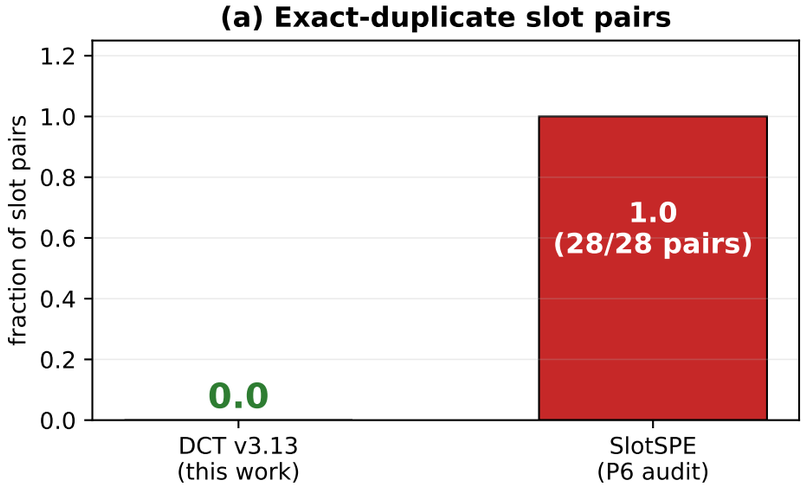
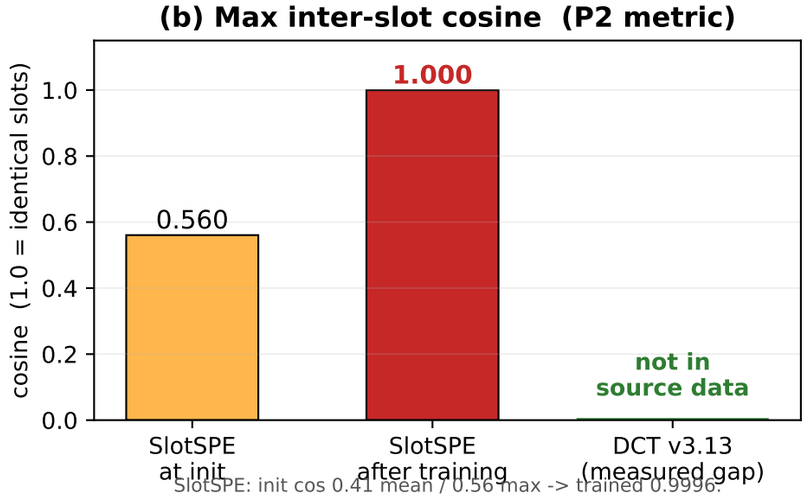
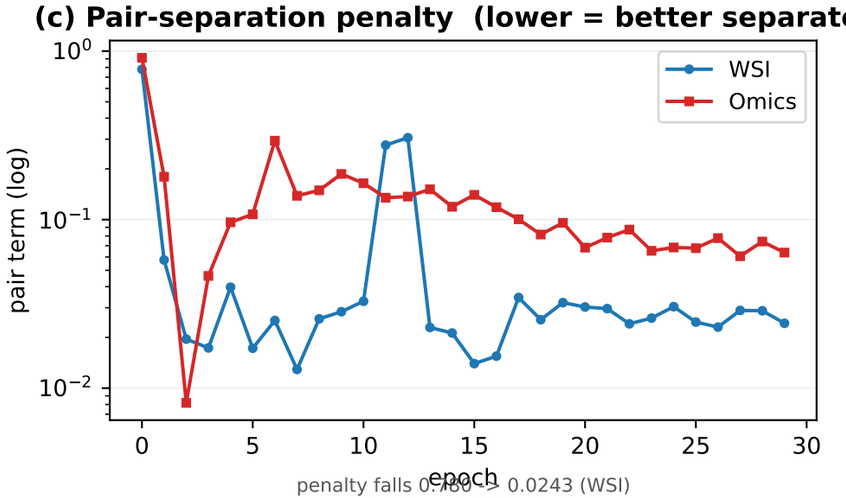
Slot redundancy (P2): DCT v3.13 does not collapse - measured, not inferred



SlotSPE bar is a documented full-redundancy finding, plotted as 1.0



SlotSPE: init cos 0.41 mean / 0.56 max -> trained 0.9996.
v3.13 CSV records pair distances, so its cosine is not derivable here
(honest gap: a checkpoint forward pass is required).



penalty falls 0.760 -> 0.0243 (WSI)
and 0.912 -> 0.0637 (Omics):
the objective is satisfied, not saturated.
