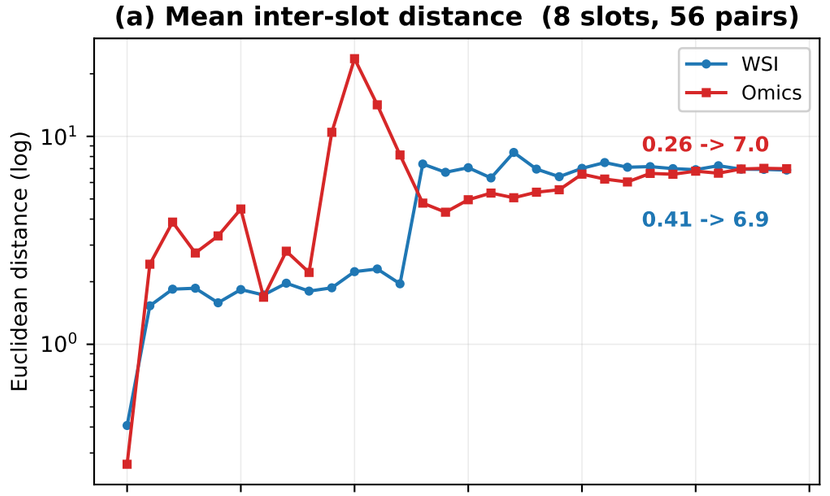
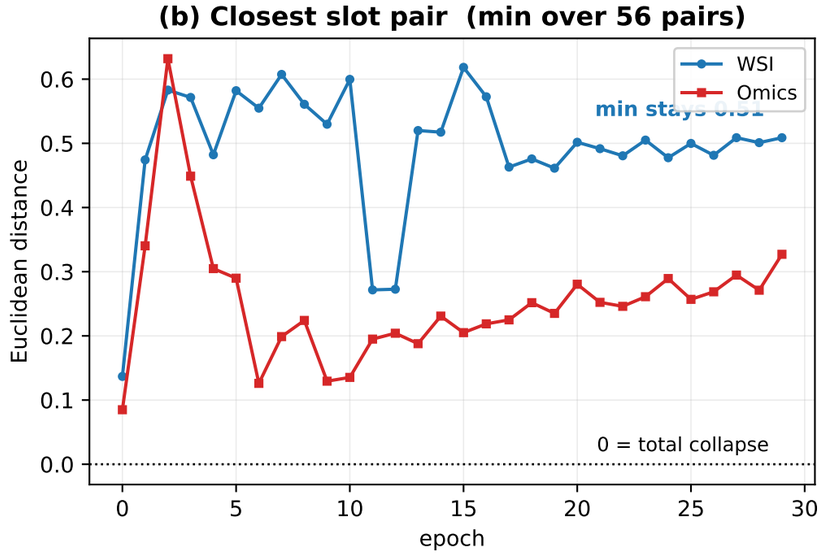
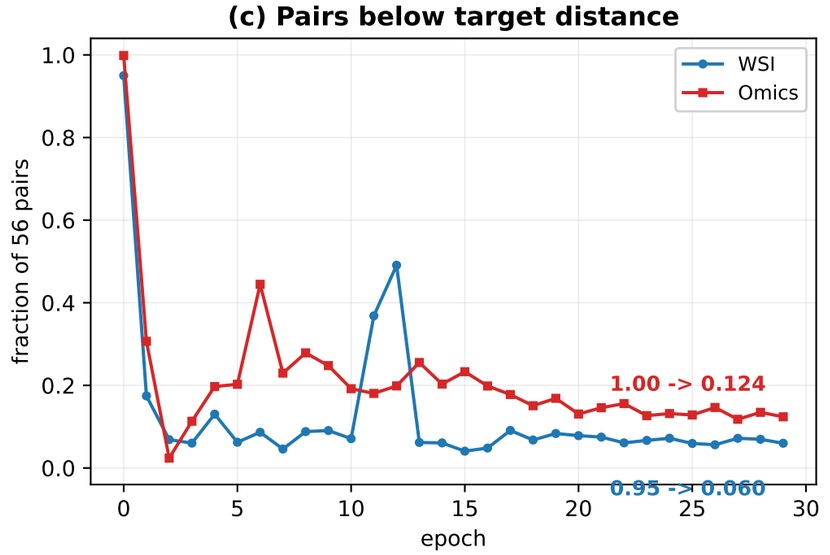
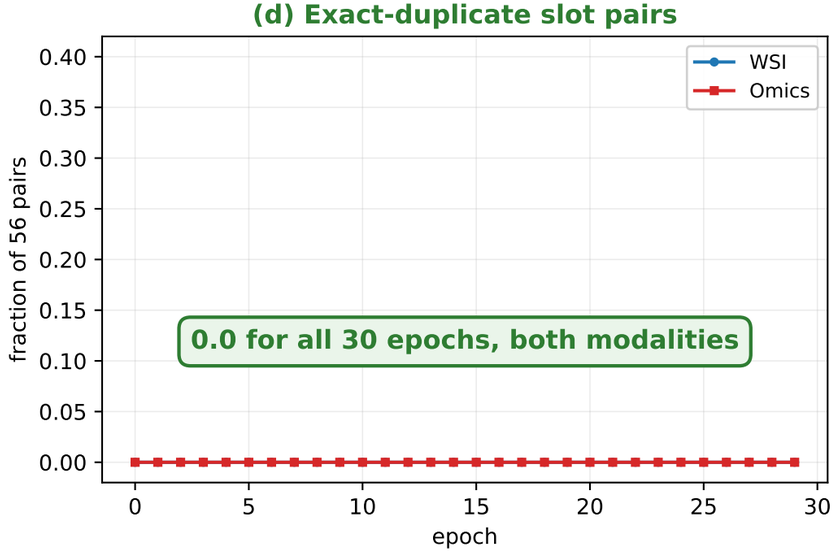
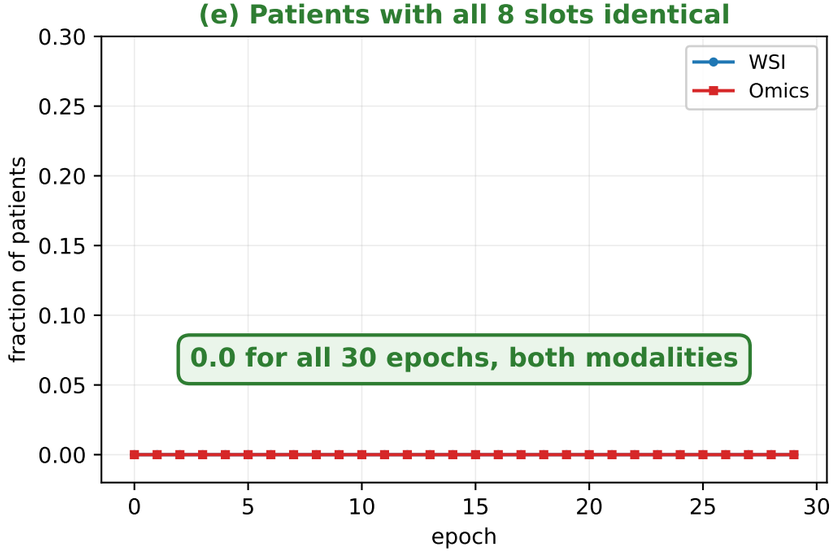
DCT v3.13 slot diversity: 8 slots stay separated for all 30 epochs (BLCA, uni2-h, seed 3, fold 0)

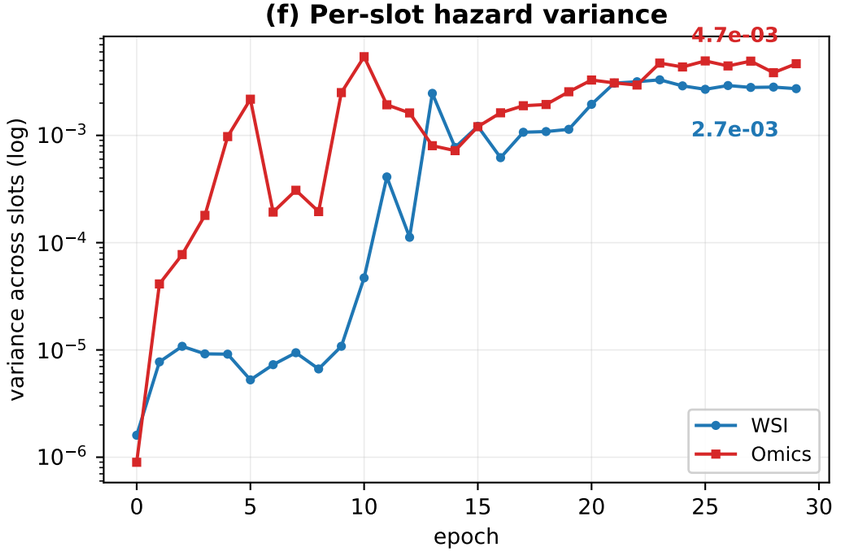












Source: results/dct_v313_full_wsi_three_decoders/blca_seed3/.../epoch_curve_fold0.csv (repaired diversity diagnostics, 8 patients/batch, 56 off-diagonal slot pairs).
Panel (b) is the decisive one: even the single most-similar slot pair per patient never approaches 0, so no patient is a SlotSPE-style near-duplicate set.
